

EXTENSION FOR LEVEL GAUGE SAMTECH SERIE IL

The extension for Level gauge Samtech serie IL is mounted on the head of the level gauge with 2 stainless steel screws.

The extension for level gauge is particularly useful in the underground tanks. In some conditions, water, mud or even ice invade the cavity where the tank accessories are located. In these circumstances the extension is necessary to allow a better reading of the dial.

The use of the extension together with a Samtech gauge guarantee to achieve a good accuracy of the reading of the tank content.

The extension has been designed to be mounted in place of the dial an so raises the dial of 240 mm at least.

Other dimensions upon request.

The extension raises the dial of 240 mm at least
